

Priority Species in Camden

Below is a list of species which are of principal importance for England (S41) and/or Species of Conservation Concern for London (LSOCC) which have been recorded in Camden since 1980 for which [Greenspace Information for Greater London](#) hold records. The numbers in the columns reflect the number of records held by GiGL and does necessarily indicate a trend in species population nor weather or not a species should be a priority for the borough. Some species have only been recorded a few times and are therefore likely to be vagrants rather than resident species. Some species may not have been looked for and may still be present (some of the moths, for example). Others have had a lot of recent survey work, so records will hide any likely decline (hedgehogs, for example). There are also species present in the borough that do not appear on this list. This list is only a starting point, and we will need to scrutinise the records behind it to work out where we should be best focussing our efforts.
